

ALIWOOD SCREENING

Architectural Timber Finish Aluminium Screening System

The Aliwood screening system offers a non-combustible yet versatile timber finish aluminium screening option that overcomes the drawbacks of traditional timber. Using the clip-on fixing method, Aliwood screening is quick and easy to install, providing the end user with an elegant and hassle-free screening option.

The system can be used both internally as well as externally in commercial and residential settings. Installed horizontally or vertically, the system delivers a natural, stylish and clean look. This architectural timber finish aluminium screening system is ideal for but not limited to soffits, ceilings, privacy walls, garage doors and feature walls.

ALIWOOD SCREENING

Architectural Timber Finish Aluminium Screening System

CONCEALED CLIP-ON FIXING

15mm Clip on Series

The standard aluminium channel is fixed to a wall of a maximum of 450mm centres. This installation allows for 3 different sized visible pieces to clip to it. The clip on fixing offers a clean and concealed look with the possibility of an express line finish. It is ideal for applications such as ceilings, feature walls and garage doors.

30/50mm Clip on Series

The standard backing of 30/50mm wide is available for 3 different depths. The system is fixed by simply locking the front piece and the backing piece together. This offers a clean line where the battens can be set out to any desired spacing. This system is ideal for privacy screens, fencing, feature walls and any conventional walls.
